"Protect Your Investment" - Ask us for a quote!

Freeze-thaw cycles in Manitoba and prolonged exposure to precipitation, can cause efflorescence and mineral staining on stone. Sealing helps protect against these and other problems like mold, acid rain, discolouration, and deterioration from water exposure. These issues are not covered under warranty.

Comparison on manufactured stone veneer after heavy rain.

Black brick with efflorescence staining on the face from repeated water exposure.

Natural Stone Selections

All natural stone selections are special order
